### 8-2-1. Hardware connection for RF Regulatory Certification

When performing RF certification on products using the SFM60R module, you must have the following hardware connections to control each RF block and download the test-firmware.

#### - Sigfox, BLE, GPS control

There is no need to download a test-firmware and one of the two below must be connected to an external connector or test-point to control the RF block.

##### [Case 1]

The SWD(pin31 and pin32) port can be used to control Sigfox, BLE and GPS.  
However, JTAG equipment such as J-link is required.

##### [Case 2]

The I2C(pin21 and pin22) port can be used to control Sigfox, BLE and GPS.  
However, I2C to USB converter is required.

### 8-2-2. Sigfox status PIN

- STATE\_CPU\_SFX : Sigfox CPU activity indicator
- STATE\_RF\_SFX : Sigfox Radio activity indicator

### 8-2-3. I2C Master for external sensors

- The TWI master is compatible with I2C operating at 100 kHz and 400 kHz.

The antenna(s) must be installed such that a minimum separation distance of at least 20 cm is maintained between the radiator (antenna) and all persons at all times. This device must not be collocated or operating in conjunction with any other antenna or transmitter.

The host manufacturer integrating this module should be assessed total compliance with all essential requirements regarding this radio module.

The host manufacturer has the responsibility that the host device should be compliance when the host device which is equipped this module get power from the battery, the additional Test, TX behavior under Low Voltage Conditions, could be required.

### **11-1. European Union regulatory compliance**

Information about regulatory compliance of the European Union for SFM60R1 module is available in the "SFM60R1 Declaration of Conformity" document.

### **11-2. Safety compliance**

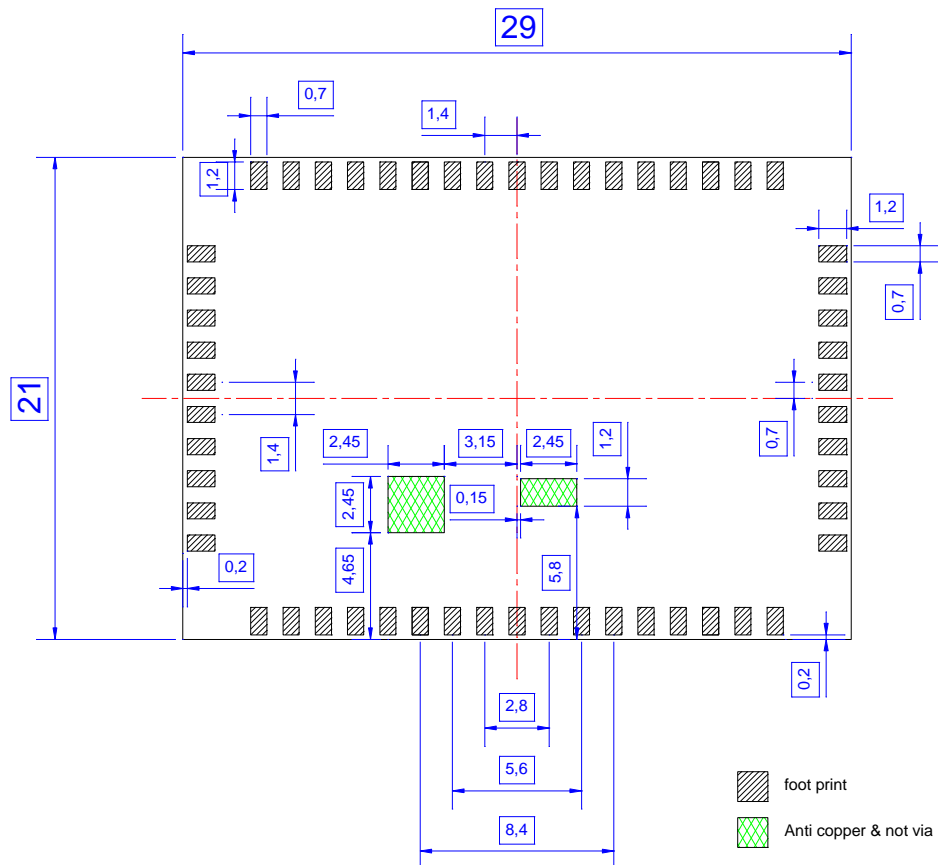

In order to fulfill the safety standard EN 60950-1, the unit must be supplied by a limited power source.

## 12. Dimensions & drawing

### 12-1. Design dimension

### 12-2. Recommend Foot print

### - X-ray by Foot print size

The foot print size was designed 0.7x1.2mm and 0.9x1.8mm then the SMD was performed.

It is not a big difference, but it can be seen that the design with 0.7x1.2mm has better soldering performance with less Void as seen in the X-ray below. The disadvantage is that manual soldering is not possible, so it may be better to design 0.9x1.8mm for development stage. However, we recommend a foot print of 0.7 x 1.2mm for mass production.

## ESD Warning

This modules are ESD sensitive devices, appropriate precautions should be taken during the module assembly in the final product. Mechanical impact and harsh tools must be avoided during the module assembly in the final product.

Product ESD specification:

- HBM  $\pm 2\text{kV}$

The following precautions must be taken:

- Do not open the protective conductive packaging until you have use the following, and are at an approved anti-static work station.

- Use a conductive wrist strap attached to a good earth ground.

- If working on a prototyping board, use a soldering iron or station that is marked as ESD-safe.
- If possible, use SMT equipment(reflow) when making prototype boards.
- Use an approved anti-static mat to cover your work surface.

- Always discharge yourself by touching a grounded bare metal surface or approved anti-static mat before picking up an ESD - sensitive electronic component.
