2. Scope

- Description
 - Sigfox Configuration 2 RC4
 - WIFI (2.4GHz) : Supports 802.11 b/g/n.
 - BLE : Support version BT4.2.
 - NFC : Type 2 near field communication (NFC-A) tag with wakeup-on-field and touch to-pair capabilities.
 - GPS : Supports GPS and GLONASS.
 - Accelerometer : $\pm 2g/\pm 4g/\pm 8g$ dynamically selectable full-scale
- Type : SMD Type
- PBA Size : 29mm(W) x 21mm(L) x 2.3mm(H)

This module has completed SIGFOX P1 verification and FCC, IC RF regulatory certification.

7-3-3. Transmitter Specification

The WiFi output power of the SFM20R4 module is set as the below table value.

The output power set in the SFM20R4 module is RF regulatory certification based on the SEONGJI reference board and the external antenna (INNO-LINK: INNO-EWFSWS-151).

Refer to "WiFi RF Output Power Control" for power control method to increase output power by using internal antenna or chip antenna which is lower efficiency than SEONGJI reference antenna.

If the output power set in the SFM20R4 module is changed, WiFi RF regulatory certification of the product is required.

- To use internal accelerometer sensor, connect pin 13 to pin 16 and pin 14 to pin 15.
- Slave address of internal accelerometer is 0x18(7bit)
- External I²C devices can be connected to pin 15 and 16.

8-2-1. Hardware connection for RF Regulatory Certification

When performing RF certification on products using the SFM20R module, you must have the following hardware connections to control each RF block and download the test-firmware.

- WiFi control and firmware download

The specified test-firmware must be downloaded to the internal flash memory of the SFM20R module and controlled using the AT command to RF certification proceed. Hardware pin47, pin49 and pin50 must be connected to an external connector or test-point.

- Sigfox, BLE, GPS control

There is no need to download a test-firmware, and one of the two below must be connected to an external connector or test-point to control the RF block.

[Case 1]

The SWD(pin31 and pin32) port can be used to control Sigfox, BLE and GPS.
However, JTAG equipment such as J-link is required.

[Case 2]

The I2C(pin21 and pin22) port can be used to control Sigfox, BLE and GPS.
However, I2C to USB converter is required.

8-2-2. WIFI status PIN

- STATE_LINK_WIFI : TBD
- STATE_WORK_WIFI : WIFI Scan State (0: not working 1: working)

8-2-3. Sigfox status PIN

- STATE_CPU_SFX : Sigfox CPU activity indicator
- STATE_RF_SFX : Sigfox Radio activity indicator

8-2-4. I2C Master for external sensors

- The TWI master is compatible with I2C operating at 100 kHz and 400 kHz.

- upto 400Khz

8-2-6. Two-pin Serial Wire Debug (SWD) interface

- The debug and trace system offers a flexible and powerful mechanism for non-intrusive debugging. The main features of the debug and trace system are:
 - . Two-pin Serial Wire Debug (SWD) interface
 - . Flash Patch and Breakpoint Unit (FPB) supports:
 - . Two literal comparators
 - . Six instruction comparators
 - . Data Watchpoint and Trace Unit (DWT)
 - . Four comparators
 - . Instrumentation Trace Macrocell (ITM)
 - . Embedded Trace Macrocell (ETM)

8-2-7. GPIOs

- support 4 GPIO

11. FCC/IC Warning Statements

FCC Part 15.19 / RSS-GEN Sec.8.4 Statements:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

- (1) l'appareil ne doit pas produire de brouillage, et
- (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

FCC Part 15.21 statement

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

RF Exposure Statement

The antenna(s) must be installed such that a minimum separation distance of at least 20 cm is maintained between the radiator (antenna) and all persons at all times. This device must not be co-located or operating in conjunction with any other antenna or transmitter.

l'exposition aux RF L'antenne (ou les antennes) doit être installée de façon à maintenir à tout instant une distance minimum de au moins 20 cm entre la source de radiation (l'antenne) et toute personne physique.

End Product Labeling

The module is labeled with its own FCC ID. If the FCC ID is not visible when the module is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. In that case, the final end product must be labeled in a visible area with the following:

"Contains FCC ID: 2AS8LSFM20R4

" Contains IC: 25119-SFM20R4

Étiquetage du produit final Le module BT111 est étiqueté avec sa propre identification FCC et son propre numéro de certification IC. Si l'identification FCC et le numéro de certification IC ne sont pas visibles lorsque le module est installé à l'intérieur d'un autre dispositif, la partie externe du dispositif dans lequel le module est installé devra également présenter une étiquette faisant référence au module inclus. Dans ce cas, le produit final devra être étiqueté sur une zone visible avec les informations suivantes :

« Contient module émetteur identification FCC ID : 2AS8LSFM20R4

« Contient module émetteur IC : 25119-SFM20R4

OEM Responsibilities to comply with FCC Regulations

The module has been certified for integration into products only by OEM integrators under the following condition:

- The antenna(s) must be installed such that a minimum separation distance of at least 20cm is maintained between the radiator (antenna) and all persons at all times.
- The transmitter module must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with FCC multi-transmitter product procedures.

As long as the two conditions above is met, further transmitter testing may not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed (for example, digital device emissions, PC peripheral requirements, etc.).

IMPORTANT NOTE: In the event that these conditions can't be met (for certain configurations or co-location with another transmitter), then the FCC authorization is no longer considered valid and the FCC ID can't be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product(including the transmitter) and obtaining a separate FCC authorization.

Manual Information To the End User

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove

this RF module or change RF related parameters in the user manual of the end product.

RSS-GEN, Sec. 8.3

This radio transmitter (IC: 25119-SFM20R4, Model: SFM20R4) has been approved by Innovation, Science and Economic Development Canada to operate with the antenna types listed below with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

- List of approved antennas

- 1) For Sigfox antenna, INNO-EL9SWS-149 or similar part manufactured by Inno-Link. Co., Ltd. (Highest permitted antenna gain: 2.01 dBi)
- 2) For Wi-Fi 2.4 GHz antenna, INNO-EL9SWS-151 or similar part manufactured by Inno-Link. Co., Ltd. (Highest permitted antenna gain: 4.15 dBi)
- 3) For BT LE antenna, INNO-EL9SWS-151 or similar part manufactured by Inno-Link. Co., Ltd. (Highest permitted antenna gain: 4.15 dBi)

Le présent émetteur radio (IC: 25119-SFM20R4, Model: SFM20R4) a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés ci-dessous et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

- Liste des antennes approuvées

- 1) Pour l'antenne Sigfox, INNO-EL9SWS-149 ou une pièce similaire fabriquée par Inno-Link. Co., Ltd. (Plus haut gain d'antenne autorisé: 2,01 dBi)
- 2) Pour antenne Wi-Fi 2,4 GHz, INNO-EL9SWS-151 ou une pièce similaire fabriquée par Inno-Link. Co., Ltd. (Plus haut gain d'antenne autorisé: 4.15 dBi)
- 3) Pour l'antenne BT LE, INNO-EL9SWS-151 ou une pièce similaire fabriquée par Inno-Link. Co., Ltd. (Plus haut gain d'antenne autorisé: 4.15 dBi)

Antenna Installation Requirement

The host manufacturer must meet the antenna requirements stated in operational description and must not give to access to antenna connector to user when you install this module into devices to be compliance with FCC section 15.203.

Antenna Trace Design for Host devices

a) Trace layout and dimensions including specific designs for each type:

1) Layout of trace design, parts, antenna, connectors, and isolation requirements;

➔ All RF trace must be 50 ohm line. Connectors are required to use SMA Type connector. And Antenna is required to use dipole antenna manufactured by Inno-Link. Co., Ltd..

But, you must not give to access to antenna connector to user when you install this module into devices to be compliance with FCC section 15.203.

2) Boundary limits of size, thickness, length, width, shape(s), dielectric constant, and impedance must be clearly described for each type of antenna;

➔ Antenna should be used only SMA type antenna manufactured by Inno-Link Co., Ltd.. Different antenna type is not acceptable.

3) Different antenna length and shapes affect radiated emissions, and each design shall be considered a different type; e.g., antenna length in multiple(s) of frequency wavelength and antenna shape (traces in phase) can affect antenna gain and must be considered;

➔ Different antenna is unacceptable.

b) Appropriate parts by manufacturer and specifications.

- 1) For Sigfox antenna, INNO-EL9SWS-149 or similar part manufactured by Inno-Link. Co., Ltd.
- 2) For Wi-Fi 2.4 GHz antenna, INNO-EL9SWS-151 or similar part manufactured by Inno-Link. Co., Ltd.
- 3) For BT LE antenna, INNO-EL9SWS-151 or similar part manufactured by Inno-Link. Co., Ltd.

c) Test procedures for design verification.

The manufacturer should verify that the antenna trace design on the PCB board is compliance with this Antenna Trace Design documents.

You connect the antenna connector of the device to the input of a measurement instrument. And you set the measurement instrument to the proper options for each frequency bands and conduct the test to get the output power from the antenna connector. The permissible output power range is in below table to verify the antenna trace design is appropriate for this document.

Band	Output power	Tolerance
WiFi	19.5 dBm	+/- 2.5 dB
Sigfox	22.1385 dBm	+/- 1.5 dB
BT LE	3.48 dBm	+/- 4.0 dB

d) Production test procedures for ensuring compliance.

The host product itself is required to comply with all other applicable FCC equipment authorization regulations, requirements.

So, the host device should be tested for unintentional radiators under Part 15 subpart B for non-transmitter functions on the transmitter module as appropriate.

- 4) The above data is to be provided by a Gerber file (or equivalent) for PCB layout.

12. Dimensions & drawing

12-1. Design dimension

12-2. Recommend Foot print

- X-ray by Foot print size

The foot print size was designed 0.7x1.2mm and 0.9x1.8mm then the SMD was performed.

It is not a big difference, but it can be seen that the design with 0.7x1.2mm has better soldering performance with less Void as seen in the X-ray below. The disadvantage is that manual soldering is not possible, so it may be better to design 0.9x1.8mm for development stage. However, we recommend a foot print of 0.7 x 1.2mm for mass production.

Please don't use a bigger PAD like as 0.9x1.8mm than recommended PAD except for the development stage.

ESD Warning

This modules are ESD sensitive devices, appropriate precautions should be taken during the module assembly in the final product. Mechanical impact and harsh tools must be avoided during the module assembly in the final product.

Product ESD specification:

- HBM $\pm 2\text{kV}$

The following precautions must be taken:

- Do not open the protective conductive packaging until you have use the following, and are at an approved anti-static work station.

- Use a conductive wrist strap attached to a good earth ground.

- If working on a prototyping board, use a soldering iron or station that is marked as ESD-safe.
- If possible, use SMT equipment(reflow) when making prototype boards.
- Use an approved anti-static mat to cover your work surface.

- Always discharge yourself by touching a grounded bare metal surface or approved anti-static mat before picking up an ESD - sensitive electronic component.
